Extruded Thermoplastics as Lane Delineation Kenneth R. Agent,Jerry G. Pigman,1988 This study involved an evaluation of large scale installations of both hydrocarbon and alkyd extruded thermoplastics as lane delineation on sections of interstate highways having open graded surfaces The objective of the study was to evaluate the performance of thermoplastics as lane delineation and to compare the performance of hydrocarbon versus alkyd formulations Data were collected on a periodic basis over an 18 month period Data collection consisted of daytime observations of the appearance and durability of the thermoplastic material along with reflectivity measurements using a portable retroreflectometer The evaluation revealed that both the hydrocarbon and alkyd extruded thermoplastic material maintained their appearance durability and reflectivity over the 18 month study period It was found that the alkyd formulation maintained a higher level of reflectivity than the hydrocarbon formulations Based on performance it was recommended that extruded thermoplastic continue to be used as a lane delineation material and its use be expanded to other bituminous pavements on high volume roadways Either formulation could be used but it was recommended that the installations on the open graded pavements continue to be monitored to determine if either formulation performs substantially better on a long term basis

Long-term Evaluation of Durable Lane Delineation Materials Kenneth R. Agent,Jerry G. Pigman,1989 The objective of this report was to summarize the long term performance of several types of durable lane delineation materials Polyester paint was determined to be an effective durable lane material with most use of this material being on asphaltic concrete surfaces having an average daily traffic of under 10 000 Extruded thermoplastic was also determined to be an effective durable lane delineation material with its cost limiting its use to higher volume asphaltic concrete surfaces Either the hydrocarbon or alkyd thermoplastic formulation could be used but the alkyd formulation was observed to maintain a higher reflectivity While not classified as a durable marking material water based paint could be used as an alternative to alkyd traffic paint The 3M 350 Series Stamark tape was judged as being an effective lane delineation material but its cost would limit its use to specific areas such as high volume roads having a portland cement concrete surface Standard
