research paper About the Strong Sylow Theorem for the Prime p in Simple Locally Finite Groups We first give an overview of
simple locally finite groups and reduce their Sylow theory for the prime p to a conjecture of Prof Otto H Kegel about the rank
unbounded ones of the 19 known families of finite simple groups Part 2 introduces a new scheme to describe the 19 families
the family T of types defines the rank of each type and emphasises the role of Kegel covers This part presents a unified
picture of known results and is the reason why our title starts with About We then apply new ideas to prove the conjecture
for the alternating groups see Page ii Thereupon we remember Kegel covers and sequences Finally we suggest a plan how to
prove the conjecture step by step which leads to further conjectures thereby unifying Sylow theory in locally finite simple
groups with Sylow theory in locally finite and p soluble groups In Part 3 ISBN 978 3 7578 6001 1 of the Trilogy we continue
the program begun in 10 to optimise along the way 1 its Theorem about the first type A_n of infinite families of finite simple
groups step by step to further types by proving it for the second type A_{PSLn} We start with proving the Conjecture 2 of 10
about the General Linear Groups by using new ideas see Page ii and then break down this insight to the Special Linear and
the PSL Groups We close with suggestions for future research regarding the remaining rank unbounded types the Classical
