

Exercise #3

Description: The figure below shows the motion of five distant stars (A - E) relative to a stationary observer (telescope). The speed and direction of each star is indicated by the length and direction of the arrows shown.

Ranking Instructions: Rank the Doppler shift of the light observed from each star (A - E) from greatest "blueshift", through no shift, to greatest "redshift".

Ranking Order:

Greatest blueshift 1 E
2 D
3 B
4 C
Greatest redshift 5 A

Or, the Doppler shift for each star is the same. _____ (indicate with check mark).

Carefully explain your reasoning for ranking this way:

The observer sees the great blueshift due to Star E that's moving fast towards it. Star E and Star D are similar, they both move towards the observer at a slower rate. Star B is not moving away or towards so is in the middle. The star that has the redshift and is moving the fastest from the observer is Star A. Star C is almost as Star A but not as extreme as Star A as it moves away from the observer at a slower rate.
