Wetland Plant Associations of the Malheur, Umatilla, and Wallowa-Whitman National Forests Aaron Francis Wells, 2006 This guide presents a classification of the deep canyon and subalpine riparian and wetland vegetation types of the Malheur Umatilla and Wallowa Whitman National Forests A primary goal of the deep canyon and subalpine riparian and wetland classification was a seamless linkage with the midmontane northeastern Oregon riparian and wetland classification provided by Crowe and Clausnitzer in 1997 The classification is based on potential natural vegetation and follows directly from the plant association concept for riparian zones The 95 vegetation types classified across the three national forests were organized into 16 vegetation series and included some 45 vegetation types not previously classified for northeastern Oregon subalpine and deep canyon riparian and wetland environments The riparian and wetland vegetation types developed for this guide were compared floristically and environmentally to riparian and wetland classifications in neighboring geographic regions For each vegetation type a section was included describing the occurrence s of the same or floristically similar vegetation types found in riparian and wetland classifications developed for neighboring geographic regions Lastly this guide was designed to be used in conjunction with the midmontane guide to provide a comprehensive look at the riparian and wetland vegetation of northeastern Oregon Critical Mineral Resources of the United States K. J. Schulz, John H.

DeYoung, Robert R. Seal, Dwight C. Bradley, 2017 As the importance and dependence of specific mineral commodities increase so does concern about their supply The United States is currently 100 percent reliant on foreign sources for 20 mineral commodities and imports the majority of its supply of more than 50 mineral commodities Mineral commodities that have important uses and face potential supply disruption are critical to American economic and national security However a mineral commodity s importance and the nature of its supply chain can change with time a mineral commodity that may not have been considered critical 25 years ago may be critical today and one considered critical today may not be so in the future The U S Geological Survey has produced this volume to describe a select group of mineral commodities currently critical to our economy and security For each mineral commodity covered the authors provide a comprehensive look at 1 the

commodity s use 2 the geology and global distribution of the mineral deposit types that account for the present and possible future supply of the commodity 3 the current status of production reserves and resources in the United States and globally and 4 environmental considerations related to the commodity s production from different types of mineral deposits The volume describes U S critical mineral resources in a global context for no country can be self sufficient for all its mineral commodity needs and the United States will always rely on global mineral commodity supply chains This volume provides the scientific understanding of critical mineral resources required for informed decisionmaking by those responsible for ensuring that the United States has a secure and sustainable supply of mineral commodities
