Amir, 2020-12-17 An introductory text providing the reader with a thorough background to the rich world of applications of stochastic processes **The Logic of Thermostatistical Physics** Gerard G. Emch, Chuang Liu, 2013-04-17 This book addresses several of the foundational problems in thermophysics i e thermodynamics and statistical mechanics It is an interdisciplinary work in that it examines the philosophical underpinning of scientific models and theories it also refines the analysis of the problems at hand and delineates the place occupied by various scientific models in a generalized philosophical landscape Hence our philosophical or theoretical inquiry focuses sharply on the concept of models and our empirical or laboratory evidence is sought in the model building activities of scientists who have tried to confront the epistemological problems arising in the thermophysical sciences Primarily for researchers and students in physics philosophy of science and mathematics our book aims at informing the readers with all the indispensable technical details made readily available about

the nature of the foundational problems how these problems are approached with the help of various mathematical models and what the philosophical implications of such models and approaches involve Some familiarity with elementary thermophysics and or with introductory level philosophy of science may help but neither is a prerequisite The logical and mathematical background required for the book are introduced in the Appendices Upon using the Subject Index the readers may easily locate the concepts and theorems needed for understanding various parts of the book The Citation Index lists the authors of the contributions we discuss in detail

Sailing the Ocean of Complexity Sauro Succi, 2022-05-12 Both superb and essential Succi with clarity and wit takes us from quarks and Boltzmann to soft matter precisely the frontier of physics and life Stuart Kauffman MacArthur Fellow Fellow of the Royal Society of Canada Gold Medal Accademia Lincea We live in a world of utmost complexity outside and within us There are thousand of billions of billions of stars out there in the Universe a hundred times more molecules in a glass of water and another hundred times more in our body all working in sync to keep us alive and well At face value such numbers spell certain doom for our ability to make any sense at all of the world around and within us And yet they don't Why and how this book endeavours to provide an answer to these questions with specific reference to a selected window of the physics biology interface The story unfolds over four main Parts Part I provides an introduction to the main organizational principles which govern the functioning of complex systems in general such as nonlinearity nonlocality and ultra dimensions Part II deals with thermodynamics the science of change starting with its historical foundations laid down in the 19th century

and then moving on to its modern and still open developments in connection with biology and cosmology Part III deals with the main character of this book free energy and the wondrous scenarios opened up by its merger with the modern tools of statistical physics It also describes the basic facts about soft matter the state of matter most relevant to biological organisms Finally Part IV discusses the connection between time and complexity and its profound implications on the human condition i e the one sided nature of time and the awareness of human mortality It concludes with a few personal considerations about the special place of emotions and humility in science
