Sobota,2017 Article 38 of the Statute of the International Court of Justice defines

international law to include not only custom and convention between States but also the general principles of law recognized by civilized nations within their municipal legal systems In 1953 Bin Cheng wrote his seminal book on general principles identifying core legal principles common to various domestic legal systems across the globe This monograph summarizes and analyzes the general principles of law and norms of international due process with a particular focus on developments since Cheng s writing The aim is to collect and distill these principles and norms in a single volume as a practical resource for international law jurists advocates and scholars The information contained in this book holds considerable importance given the growth of inter state intercourse resulting in the increased use of general principles over the past 60 years General principles can serve as rules of decision whether in interpreting a treaty or contract determining causation or ascertaining unjust enrichment They also include a core set of procedural requirements that should be followed in any adjudicative system such as the right to impartiality and the prohibition on fraud Although the general principles are by definition basic and even rudimentary they hold vital importance for the rule of law in international relations They are meant not to define a rule of law but rather the rule of law **Basic Principles Of Chinese Philosophy (Volumes 1 & 2)** Jiaxiang Hu,2019-01-22 Among world s three major philosophic traditions Chinese philosophy excels in ethical discourse As a collective wisdom on a par with Aristotle s Ethics and Kant s Critique of Practical Reason Chinese philosophy now needs to be systematized and developed Today Chinese philosophy per se has often been reduced to the historical approach to it hence its slower development in comparison with European and Indian philosophies The author of this book avails himself of Kant s model of human psychic structure synthesizes the basic elements of Chinese philosophy into a rigorous theoretical framework and presents a panoptic view of the edifice of traditional Chinese philosophy *Fundamental Principles of General Relativity Theories* H. Treder,2013-03-09 The present monograph is not a self contained introductory text Instead it presupposes to a large extent that the reader is not only thoroughly familiar with the special theory of relativity but that he or she has studied the standard aspects of the general theory as weIl Starting from local and global formulations of the principlcs of inertia and relativity we discuss the microscopic ancl telcscopic aspects of gravitation Our central goal has been to demonstrate that the foundations of gravitational theory laid by Newton and Einstein imply questions on thc relation betwecn the micro and macrocosm The discussions surrounding these physical points can be rather weH understood without an elaborate mathcmatical formalism All the same we have attempted to make the main theme of our presentation accessible also to readers outside the circle of pundits by including two appendixes of a largely instructional nature Appendix A gives a brief review of the basic concepts of four dimensional spaces for the convenience of readers who need 9 Preface such a recapitulation while Appendix B deals with the more exotic notions of tetrad theory which admittedly stands in wider need of elucidation Both appendixes are meant in any event to serve the useful purpose of establishing our notation and collecting formulas for easy reference in the main body of the book The general reader may accordingly find it helpful first to peruse one or both of the appendixes before
