Lithium-Ion Cells Yury Koshtyal ,Alexander Rumyantsev,2024-12-24 A large quantity of articles and books have been published on the designated topics However most of the literary sources describe the results of scientific articles on the synthesis and study of perspective materials reveal circuit and design solutions for constructing control systems and manufacturing batteries and are educational materials At the same time a small part of the published sources includes the following descriptions of materials produced industrially and used in the LIC manufacturing process demonstrations of the industrially produced LIC energy and power parameters analysis of the characteristics of manufactured miniature lithium ion cells solid state LICs lithium metal cells and all solid state cells as well as others Considering the popularity of the discussed topics one can hope to find detailed information on the Internet Indeed modern search engines make it possible to locate a sufficiently large number of relevant documents However while conducting such research we encountered the following challenges the data are somewhat fragmented and their systematization and structuring are required search results do not always meet search queries For instance data that were relevant to the topic were found but they did not match the query as accumulated data grow the search time for new information extends the choice of search engine and location different countries affects search

results the data are not indexed in search engines although the correct keywords and website were requested the information disappears due to website updates and the found data require additional processing For example many presentations show changes in the shape of the discharge curves depending on the discharge current strength In addition however Ragone plots are necessary for a correct comparison and therefore the mathematical processing of presented results is required Thus this book was written to systematize and structure information on industrially produced materials for LIC manufacturing and industrially produced and promising LICs and lithium metal rechargeable cells for various applications

The Dieselgate Marco Frigessi di Rattalma, 2017-01-20 This book explains compares and assesses the legal implications of Dieselgate within a range of selected jurisdictions and at the EU international and comparative law level The book analyses the US EPA VW 14 7 billion dollar settlement of 2016 one of the largest civil settlements in the history of environmental law As it shows the Dieselgate affair has raised a host of issues concerning corporate and social responsibility tort liability environmental liability contractual defective products warranty and false environmental claims in a range of jurisdictions Issues like repurchasing or retrofitting cars from consumers and making direct payments to consumers through car buy backs and compensation are analysed Further the book relates how Dieselgate has also contributed to the discussion about the introduction of more effective collective measures of redress for consumers such as class actions in Germany France Italy and the UK The book subsequently reviews the criminal offences Volkswagen is currently confronted with in Germany France and Italy i e fraud and manipulation of capital markets by

belatedly providing shareholders with essential information relevant for the share value and potentially environmental crimes. It demonstrates how Dieselgate has sparked new debates in Germany, Italy, France and the UK about the need to introduce enterprise liability for organised crimes, lack of compliance and control structures and intentional violations of the law. Lastly, the book discusses how EU law has sought to respond to Dieselgate and thus investigates the controversial EU Regulation No 2016/646 introducing a temporary conformity factor of 2.1 equivalent to a 110% increase on the current limit to be applied for NO_x in the new RDE testing cycle and the works of the EU committee of inquiry into Emissions Measurements in the Automotive Sector. Be a good girl, Valerie Marcia van Zeller, 2025-07-02. When Valerie, now in her sixties, learns that her Gen Z co-worker Anna has effectively been fired for rejecting the boss's advances, Valerie becomes her champion and so ensures that justice will prevail. But it brings back traumatic memories of when Valerie herself was the victim of sexual assault when working as an aspiring TV reporter in 1970s London. Exposing the unfair consequences of saying no in the workplace, the book vividly and with warm humour illustrates the power of standing up for another woman's rights and your own.

Designing Interaction and Interfaces for Automated Vehicles, Neville Stanton, Kirsten M. A. Revell, Patrick Langdon, 2021-03-10. Driving automation and autonomy are already upon us and the problems that were predicted twenty years ago are beginning to appear. These problems include shortfalls in expected benefits, equipment unreliability, driver skill fade and error-inducing equipment designs. *Designing Interaction and Interfaces for Automated Vehicles: User Centred Ecological Design and Testing* investigates the difficult problem of how to interface drivers with automated vehicles by offering an inclusive human-centred design process that focusses on human variability and capability in interaction with interfaces. This book introduces a novel method that combines both systems thinking and inclusive user-centred design. It models driver interaction, provides design specifications, concept designs and the results of studies in simulators on the test track and in road-going vehicles. This book is for designers of systems, interfaces, interactions, UX, Human Factors and Ergonomics researchers and practitioners involved with systems engineering and automotive academics.

In this book, Prof Stanton and colleagues show how Human Factors methods can be applied to the tricky problem of interfacing human drivers with vehicle automation. They have developed an approach to designing the human-automation interaction for the handovers between the driver and the vehicle. This approach has been tested in driving simulators and most interestingly in real vehicles on British motorways. The approach called User Centred Ecological Interface Design has been validated against driver behaviour and used to support their ongoing work on vehicle automation. I highly recommend this book for anyone interested or involved in designing human-automation interaction in vehicles and beyond.
