Delleur, 2010-12-12 Due to the increasing demand for adequate water supply caused by the augmenting global population groundwater production has acquired a new importance In many areas surface waters are not available in sufficient quantity or quality Thus an increasing demand for groundwater has resulted However the residence time of groundwater can be of the order of thousands of years while surface waters is of the order of days Therefore substantially more attention is warranted for transport processes and pollution remediation in groundwater than for surface waters Similarly pollution remediation problems in groundwater are generally complex This excellent timely resource covers the field of groundwater from an engineering perspective comprehensively addressing the range of subjects related to subsurface hydrology It provides a practical treatment of the flow of groundwater the transport of substances the construction of wells and well fields the production of groundwater and site characterization and remediation of groundwater pollution No other reference

specializes in groundwater engineering to such a broad range of subjects Its use extends to The engineer designing a well or well field The engineer designing or operating a landfill facility for municipal or hazardous wastes The hydrogeologist investigating a contaminant plume The engineer examining the remediation of a groundwater pollution problem The engineer or lawyer studying the laws and regulations related to groundwater quality The scientist analyzing the mechanics of solute transport The geohydrologist assessing the regional modeling of aquifers The geophysicist determining the characterization of an aquifer The cartographer mapping aquifer characteristics The practitioner planning a monitoring network

Irrigation Sandra Ricart, Antonio M. Rico, Jorge Olcina, 2019-12-18 The management of irrigation systems is context dependent socially constructed and technically uncertain An example of complex social ecological systems irrigation deals with both the ecosystem uncertainty and the implementation of new technological systems and water management options Issues to be addressed by irrigation systems at the global scale include water productivity and food security field operation and maintenance spate irrigation in climate change scenarios and vulnerability of environmental resources This book provides examples of some of the current challenges faced by irrigation systems from technical and social perspectives The book offers an easy to follow format focused on different case studies combining evidence based solutions for increasing resilience and reducing vulnerability of irrigation systems in semi arid and arid regions across the world

Arid Lands Water Evaluation and Management Robert Maliva,Thomas Missimer,2012-06-09 A large part of the global population lives in arid lands which have low rainfall and often lack the water required for sustainable population and economic growth This book presents a comprehensive description of the hydrogeology and hydrologic processes at work in arid lands It describes the techniques that can be used to assess and manage the water resources of these areas with an emphasis on groundwater resources including recent advances in hydrologic evaluation and the differences between how aquifer systems behave in arid lands versus more humid areas Water management techniques are described and summarized to show how a more comprehensive approach to water management is required in these areas including the need to be aware of cultural sensitivities and conditions unique to many arid regions The integration of existing resources with the addition of new water sources such as desalination of brackish water and seawater along with reusing treated wastewater will be required to meet future water supply needs Also changing climatic conditions will force water management systems to be more robust so that future water supply demands can be met as droughts become more intense and rainfall events become more intense A range of water management techniques are described and discussed in order to illustrate the methods for integrating these measures within the context of arid lands conditions *Handbook* ,1994 Item no 0431 K *Hydrology* SAIKIA, MIMI DAS,DAS, MADAN MOHAN,2009-12 The book starts with the hydrologic cycle which is the central concept of hydrology Then it moves on to basics of hydrometeorology abstraction losses like infiltration runoff in different forms instantaneous unit hydrograph IUH and its mathematical concepts like convolution integral synthetic unit hydrograph SUH and S hydrograph Finally the text concludes with estimation of flood by empirical equations and different flood frequency analysis and hydrology of basin management which deals with soil conservation water shed management and control of soil erosion that are very important for agricultural engineering *Wetland Ecology* Paul A. Keddy,2023-09-28 Richly illustrated in colour and packed with examples from every major continent and wetland type this third edition has been completely rewritten to provide undergraduates with a thoroughly accessible introduction to the basic principles It divides the world s wetlands into six principal types and presents six major causal environmental factors arranged by importance and illustrated

with clear examples making it easy for instructors to plan tailored lectures and field trips and avoid overwhelming students with unnecessary detail It retains its rigor for more advanced students with sections on research methods and experiments and over a thousand classic and contemporary references Each chapter ends with questions that review the content covered and encourage further investigation With expanded sections on topical issues such as sea level rise eutrophication facilitation and the latest approaches to restoration and conservation the new edition of this prize winning textbook is a vital resource for wetland ecology courses
