Adaptive Hypertext And Hypermedia 1st Edition By Brusilovsky Peter Published By Springer:

Adaptive Hypertext and Hypermedia Peter Brusilovsky, Alfred Kobsa, Julita Vassileva, 2013-04-17 Hypertext hypermedia systems and user model based adaptive systems in the areas of learning and information retrieval have for a long time been considered as two mutually exclusive approaches to information access Adaptive systems tailor information to the user and may guide the user in the information space to present the most relevant material taking into account a model of the user's goals interests and preferences Hypermedia systems on the other hand are user neutral they provide the user with the tools and the freedom to explore an information space by browsing through a complex network of information nodes Adaptive hypertext and hypermedia systems attempt to bridge the gap between these two approaches Adaptation of hypermedia systems to each individual user is increasingly needed With the growing size complexity and heterogeneity of current hypermedia systems such as the World Wide Web it becomes virtually impossible to impose guidelines on authors concerning the overall organization of hypermedia information The networks therefore become so complex and unstructured that the existing navigational tools are no longer powerful enough to provide orientation on where to search for the needed information It is also not possible to identify appropriate pre defined paths or subnets for users with certain goals and knowledge backgrounds since the user community of hypermedia systems is usually quite inhomogeneous This is particularly true for Web based applications which are expected to be used by a much greater variety of users than any earlier standalone application A possible remedy for the negative effects of the traditional one size fits all approach in the development of hypermedia systems is to equip them with the ability to adapt to the needs of their individual users A possible way of achieving adaptivity is by modeling the users and tailoring the system's interactions to their goals tasks and interests In this sense the notion of adaptive hypertext hypermedia comes naturally to denote a hypertext or hypermedia system which reflects some features of the user and or characteristics of his system usage in a user model and utilizes this model in order to adapt various behavioral aspects of the system to the user This book is the first comprehensive publication on adaptive hypertext and hypermedia It is oriented towards researchers and practitioners in the fields of hypertext and hypermedia information systems and personalized systems It is also an important resource for the numerous developers of Web based applications The design decisions adaptation methods and experience presented in this book are a unique source of ideas and techniques for developing more usable and more intelligent Web based systems suitable for a great variety of users The practitioners will find it important that many of the adaptation techniques presented in this book have proved to be efficient and are ready to be used in various applications *The Adaptive Web* Peter Brusilovski, Alfred Kobsa, Wolfgang Nejdl, 2007-04-24 This state of the art survey provides a systematic overview of the ideas and techniques of the adaptive Web and serves as a central source of information for researchers practitioners and students The volume constitutes a comprehensive and carefully planned collection of chapters that map out the most important areas of the adaptive Web each

Adaptive Hypertext and Hypermedia Peter Brusilovski, Alfred Kobsa, Julita Vassileva, 2014-01-15 *Web 2.0 & Semantic Web* Vladan Devedžic, Dragan Gašević, 2010-01-08 According to the W3C Semantic Web Activity 1 The Semantic Web provides a common framework that allows data to be shared and reused across application enterprise and community boundaries This statement clearly explains that the Semantic Web is about data sharing Currently the Web uses hyperlinks to connect Web pages The Semantic Web goes beyond that and focuses on data and envisions the creation of the web of data On the Semantic Web anyone can say anything about any resource on the Web This is fully based on the concept of semantic notations where each resource on the Web can have an assigned meaning This is done through the use of ontologies as a formal and explicit representation of domain concepts and their relationships 2 Ontologies are formally based on description logics This enables agents and applications to reason over the data when searching the Web which has not previously been possible Web 2 0 has gradually evolved from letting the Web users play a more active role Unlike the initial version of the Web where the users mainly consumed content users are now offered easy to use services for content production and publication Mashups blogs wikis feeds interface remixes and social networking tagging systems are examples of these well known services The success and wide adoption of Web 2 0 was in its reliance on social interactions as an inevitable characteristic of the use and life of the Web In particular Web 2

Adaptive Hypermedia and Adaptive Web-based Systems, 2002 **Social Information Access** Peter Brusilovsky, Daqing He, 2018-05-02 Social information access is defined as a stream of research that explores methods for organizing the past interactions of users in a community in order to provide future users with better access to information Social information access covers a wide range of different technologies and strategies that operate on a different scale which can range from a small closed corpus site to the whole Web The 16 chapters included in this book provide a broad overview of modern research on social information access In order to provide a balanced coverage these chapters are organized by the main types of information access i e social search social navigation and recommendation and main sources of social information

User Modeling 2003 Peter Brusilovsky, Albert Corbett, Firoella de Rosis, 2003-08-03 The refereed proceedings of the 9th International Conference on User Modeling UM 2003 held in Johnstown PA USA in June 2003 The 20 revised full papers and 28 revised poster papers presented together with 12 abstracts were carefully reviewed and selected from 106 submissions The papers are organized in topical sections on adaptive hypermedia adaptive Web natural language and dialogue plan

recognition evaluation emerging issues of user modeling group modeling and cooperation applications student modeling learning environments natural language and pedagogy and mobile and ubiquitous computing **Social Navigation of Information Space** Alan J. Munro, 1999-08-13 This volume examines how people deal with information in a computerized environment looking at what happens when people actively explore information space looking for objects without specific goals in mind The topics are particularly relevant to the industrial application of computer supported cooperative work CSCW techniques especially with regard to teleworking and virtual organizations This volume will be useful for researchers interested in human computer interaction virtual communities and information visualization
