Bengtsson, M. Ghil, E. Källen, 2012-12-06 One of the main reasons we cannot tell what the weather will be tomorrow is that we do not know accurately enough what the weather is today Mathematically speaking numerical weather prediction NWP is an initial value problem for a system of nonlinear partial differential equations in which the necessary initial values are known only incompletely and inaccurately Data at the initial time of a numerical forecast can be supplemented however by observations of the atmosphere over a time interval preceding it New observing systems in particular polar orbiting and geostationary satellites which are providing observations continuously in time make it absolutely necessary to find new and more satisfactory methods of assimilating meteorological observations for the dual purpose of defining atmospheric states and of issuing forecasts from the states thus defined FUNDAMENTAL progress in this area has been made in recent years and this book attempts to give a review and some suggestions for further improvements in the field of meteorological data assimilation methods The European Centre for Medium Range Weather Forecasts ECMWF every year organises seminars for the benefit of meteorologists and geophysicists of the ECMWF Member states The 1980 Seminar was devoted to data assimilation methods and this book contains selected lectures from that seminar The purpose of the seminar was twofold it was intended to give a basic introduction to the subject as well as an overview of the latest developments in the field

Data Assimilation for Atmospheric, Oceanic and Hydrologic Applications (Vol. III) Seon Ki Park, Liang Xu, 2016-12-26 This book contains the most recent progress in data assimilation in meteorology oceanography and hydrology including land surface It spans both theoretical and applicative aspects with various methodologies such as variational Kalman filter ensemble Monte Carlo and artificial intelligence methods Besides data assimilation other important topics are

Olafsson, Jian-Wen Bao, 2020-11-25 *Uncertainties in Numerical Weather Prediction* is a comprehensive work on the most current understandings of uncertainties and predictability in numerical simulations of the atmosphere It provides general knowledge on all aspects of uncertainties in the weather prediction models in a single easy to use reference The book illustrates particular uncertainties in observations and data assimilation as well as the errors associated with numerical integration methods Stochastic methods in parameterization of subgrid processes are also assessed as are uncertainties associated with surface atmosphere exchange orographic flows and processes in the atmospheric boundary layer Through a better understanding of the uncertainties to watch for readers will be able to produce more precise and accurate forecasts This is an essential work for anyone who wants to improve the accuracy of weather and climate forecasting and interested parties developing tools to enhance the quality of such forecasts Provides a comprehensive overview of the state of numerical weather prediction at spatial scales from hundreds of meters to thousands of kilometers Focuses on short term 1 15 day atmospheric predictions with some coverage appropriate for longer term forecasts Includes references to climate prediction models to allow applications of these techniques for climate simulations
