Advanced Approach Light System Behrend, Ferdinand, 2017-08-25 The constant growth in aviation requires the introduction of new technologies in order to meet the demand for increasing capacity Especially the airport often represents the limiting factor Poor visibility conditions and an insufficiently equipped ground infrastructure regarding navigation facilities can lead to restrictions in maintaining the prevailing traffic flow especially during the approaches The conventional instrument landing system consists of numerous technical components which are causing expenses regarding maintenance and operation Smaller airports are often only partially or not at all equipped with the appropriate ground facilities This can bring air traffic to a total halt during certain visibility conditions New satellite based approach procedures offer the possibility to keep up air traffic even during poor visibility conditions regardless of the ground infrastructure required in the past These also offer now a barometric guidance or an augmented satellite signal for the vertical flight guidance component With the use of these approach procedures there is however the possibility of new faults and errors of the vertical flight guidance signal In a system based on electromagnetic radio waves a fault is angular meaning if the airplane gets nearer to the transmitter on ground the absolute possible failure of the target approach path gets smaller In a satellite based approach on the other hand it is constant during the whole approach The result can be a great deviation from the target approach path even just before reaching the runway threshold Often only after reaching the decision height and the herewith connected visual contact to corresponding ground features these faults can be recognized during poor visibility conditions close to the minima of a precision approach flight The larger the absolute error to the target approach path the more crucial it gets to initiate a missed approach procedure and therefore preventing a drop out of the relevant obstacle

clearance limit Research has shown that through the currently present visual characteristics of the approach lighting system the actual position cannot be determined sufficiently regarding the runway threshold and the target approach path in order to estimate the decision height correctly The here presented Advanced Approach Light System is supposed to be an additional visual aid in order to support the cockpit crew in its decisions Therefore it should amount to improve the awareness of the situation regarding constant vertical faults The new navigation lighting system has been integrated into a flight simulator and was tested by licensed airline pilots within two test series with varying visibility conditions and decision heights Next to basic functionality operational usability in existing procedures of practical routines in the cockpit has been evaluated The results of the test series have demonstrated a significant improvement in identifying vertical faults with the support of the Advanced Approach Light System The decision to initiate a missed approach was made immediate and prompt and therefore the airplane stayed within the obstacle clearance limit even in a low decision height In contrast the trial participants without the new system took reluctant and often far too late decisions which lead to a drop out of the obstacle clearance limit The Advanced Approach Lighting System has significantly improved the situation awareness for pilots in command in recognizing vertical faults when reaching the decision height The integration in existing work routines and its operative use happened flawlessly and was highly accepted by the trial participants Das stetige Wachstum in der Luftfahrt erfordert die Einf hrung neuer Technologien um der Nachfrage nach steigender Kapazität gerecht zu werden Insbesondere das System Flughafen stellt hierbei oftmals den limitierenden Faktor dar Schlechte Sichtbedingungen und die unzureichende bodenseitige Ausr stung mit Navigationseinrichtungen können f r Einschr nkungen in der Aufrechterhaltung des bestehenden Verkehrsflusses sorgen insbesondere bei Landeanfl gen Das konventionelle Instrumentenlandesystem besteht aus einer Vielzahl an technischer Komponenten die hohen Aufwand hinsichtlich Wartung und Betrieb verursachen Kleine Flugh fen sind oft nur teilweise oder gar nicht mit den entsprechenden Bodenkomponenten ausger stet so dass der Flugbetrieb bei bestimmten Sichtbedingungen vollst ndig eingestellt werden muss Neue satellitengest tzte Anflugverfahren bieten die M glichkeit den Flugbetrieb auch bei schlechten Sichtbedingungen aufrechtzuerhalten unabh ngig von der bisher notwendigen Bodeninfrastruktur Diese bieten mittlerweile ebenso eine auf der barometrischen H henmessung oder einem aufgewerteten Satellitensignal basierende vertikale Flugf hrungskomponente Allerdings besteht mit der Verwendung entsprechender Anflugverfahren auch eine neue m gliche Fehlercharakteristik des vertikalen Flugf hrungssignals Ist ein Fehler beim auf elektromagnetischen Funkwellen basierenden Instrumentenlandesystem winkelf rmig d h je n her sich das Luftfahrzeug dem Sender am Boden n hert umso kleiner wird die absolute Ablage zum Sollanflugweg ist dieser bei satellitengest tzten Anfl gen konstant ber den gesamten Endanflug Eine gro e Abweichung vom Sollanflugweg auch kurz vor Erreichen der Landebahnschwelle kann die Folge sein Bei schlechten Sichtbedingungen nahe den Minima eines Pr zisionsanfluges kann der Fehler oft erst bei Erreichen der Entscheidungsh he und dem damit verbundenen visuellen Kontakt zu entsprechenden

Bodenmerkmalen erkannt werden. Je größer die Ablage zum Sollanflugweg umso entscheidender ist das unverzügliche Einleiten des Fehlanflugs um ein Verlassen der entsprechenden Hindernisfreibereiche zu verhindern. Untersuchungen haben gezeigt, dass die aktuell vorhandenen visuellen Merkmale der Anflugbefeuerung nicht ausreichend sein können. Die tatsächliche Position bezüglich der Landebahnschwelle und des Sollanflugweges bei Erreichen der Entscheidungshöhe einzuschätzen. Das hier vorgestellte Advanced Approach Light System soll die Cockpitbesatzung als zusätzliches visuelles Merkmal bei der Entscheidung unterstützen und so zur Verbesserung des Situationsbewusstseins hinsichtlich konstanter vertikaler Fehler beitragen. Das neue Befeuerungssystem wurde in einen Flugsimulator integriert und innerhalb zweier Versuchsreihen mit unterschiedlichen Sichtbedingungen und Entscheidungshöhen von lizenzierten Verkehrspiloten getestet. Dabei sollte neben der grundsätzlichen Funktionalität auch die operative Einsetzbarkeit in den bestehenden Ablauf der Handlungsabläufe im Cockpit untersucht werden. Die Ergebnisse der Versuchsreihen haben eine erhebliche Verbesserung im Erkennen vertikaler Fehler mit Hilfe des Advanced Approach Light System aufgezeigt. Die Entscheidung zum Einleiten des Fehlanflugs erfolgte direkt und unverzüglich, wodurch das Luftfahrzeug auch bei sehr niedriger Entscheidungshöhe noch innerhalb des Hindernisfreibereiches blieb. Im Gegensatz dazu wurde bei den Versuchsteilnehmern, denen nicht das neue System zur Verfügung stand, die Entscheidung eher zögerlich und oftmals viel später getroffen, was zu einem Verlassen des Hindernisfreibereichs führte. Das Situationsbewusstsein der Luftfahrzeugführer zum Erkennen vertikaler Fehler beim Erreichen der Entscheidungshöhe wurde durch das Advanced Approach Light System wesentlich erhöht. Die Integration in bestehende Arbeitsabläufe und der operative Einsatz erfolgten bei hoher Akzeptanz problemlos durch die Versuchsteilnehmer.

Handbook of Real-Time and Embedded Systems Insup Lee, Joseph Y-T. Leung, Sang H.

Son, 2007-07-23 Real time and embedded systems are essential to our lives from controlling car engines and regulating traffic lights to monitoring plane takeoffs and landings to providing up to the minute stock quotes. Bringing together researchers from both academia and industry, the Handbook of Real Time and Embedded Systems provides comprehensive coverage. *The use of airspace* Great Britain: Parliament: House of Commons: Transport Committee, 2009-07-10 The Government's Future of Air Transport strategy aims to significantly increase UK airport capacity over the next two decades to accommodate the predicted growth in demand for air travel. New runways at Heathrow and Stansted airports are two of the key airport development proposals. If all the White Paper supported airport development proposals came to fruition, current Government forecasts predict that the number of passengers passing through UK airports will increase from 241 million passengers a year in 2007 to 455 million passengers a year in 2030. This UK growth matches air traffic predictions for the whole continent. Eurocontrol, the European Organisation for the Safety of Air Navigation, predicts that European air traffic will double by 2020. If rising demand for air travel is to be met effectively through additional airport capacity, a corresponding increase in airspace capacity must be realised. However, a country's airspace is the portion of atmosphere above its territory and territorial

waters controlled by that country is a finite resource UK airspace particularly in the South East of England is already some of the busiest and most complex to manage in the world This will almost certainly require improvements in the efficiency of the UK air traffic management system The Committee's inquiry aims to look at how to meet these challenges Its findings are aimed at those organisations responsible for airspace related decisions in the UK the CAA NATS and the Department for Transport Passenger numbers and freight demand globally have declined in 2008 and in the first months of 2009 In its conclusions and recommendations the Committee covered the management of airspace strategy change and co ordination in airspace management environmental impacts of airspace changes and European developments
