Algebraic Computability and Enumeration Models Cyrus F. Nourani, 2016-02-24 This book Algebraic Computability and Enumeration Models Recursion Theory and Descriptive Complexity presents new techniques with functorial models to address important areas on pure mathematics and computability theory from the algebraic viewpoint The reader is first introduced to categories and functorial models with Kleene algebra examples Recursive Algebra, Analysis and

Michiel Hazewinkel, 2013-12-20 **Boolean Functions and Computation Models** Peter Clote, Evangelos

Kranakis, 2013-03-09 The foundations of computational complexity theory go back to Alan Turing in the 1930s who was concerned with the existence of automatic procedures deciding the validity of mathematical statements The first example of such a problem was the undecidability of the Halting Problem which is essentially the question of debugging a computer program Will a given program eventually halt Computational complexity today addresses the quantitative aspects of the solutions obtained Is the problem to be solved tractable But how does one measure the intractability of computation Several ideas were proposed A Cobham Cob65 raised the question of what is the right model in order to measure a computation step M Rabin Rab60 proposed the introduction of axioms that a complexity measure should satisfy and C Shannon Sha49

suggested the boolean circuit that computes a boolean function However an important question remains What is the nature of computation In 1957 John von Neumann vN58 wrote in his notes for the Silliman Lectures concerning the nature of computation and the human brain that logics and statistics should be primarily although not exclusively viewed as the basic tools of information theory Also that body of experience which has grown up around the planning evaluating and coding of complicated logical and mathematical automata will be the focus of much of this information theory The most typical but not the only such automata are of course the large electronic computing machines

Handbook of Computability Theory

E.R. Griffor,1999-10-01 The chapters of this volume all have their own level of presentation The topics have been chosen based on the active research interest associated with them Since the interest in some topics is older than that in others some presentations contain fundamental definitions and basic results while others relate very little of the elementary theory behind them and aim directly toward an exposition of advanced results Presentations of the latter sort are in some cases restricted to a short survey of recent results due to the complexity of the methods and proofs themselves Hence the variation in level of presentation from chapter to chapter only reflects the conceptual situation itself One example of this is the collective efforts to develop an acceptable theory of computation on the real numbers The last two decades has seen at least two new definitions of effective operations on the real numbers

Mathematical Theory and Computational Practice Klaus Ambos-Spies,Benedikt Löwe,Wolfgang Merkle,2009-07-15 This book constitutes the proceedings of the 5th Conference on Computability in Europe CiE 2009 held in Heidelberg Germany during July 19 24 2009 The 34 papers presented together with 17 invited lectures were carefully reviewed and selected from 100 submissions The aims of the conference is to advance our theoretical understanding of what can and cannot be computed by any means of computation It is the largest international meeting focused on computability theoretic issues

Revolutions and Revelations in Computability Ulrich Berger,Johanna N. Y. Franklin,Florin Manea,Arno Pauly,2022-06-25 This book constitutes the proceedings of the 18th Conference on Computability in Europe CiE 2022 in Swansea UK in July 2022 The 19 full papers together with 7 invited papers presented in this volume were carefully reviewed and selected from 41 submissions The motto of CiE 2022 was *Revolutions and revelations in computability* This alludes to the revolutionary developments we have seen in computability theory starting with Turing's and Gödel's discoveries of the uncomputable and the unprovable and continuing to the present day with the advent of new computational paradigms such as quantum computing and bio computing which have dramatically changed our view of computability and revealed new insights into the multifarious nature of computation

Computable Structure Theory Rodney G. Downey,Alexander Melnikov,2025-08-21 This is the first book which gives a unified theory for countable and uncountable computable structures The work treats computable linear orderings graphs groups and Boolean algebras unified with computable metric and Banach spaces profinite groups and the like Further it provides the first account of these that exploits effective versions of dualities such as Stone and Pontryagin dualities The

themes are effective classification and enumeration Topics and features if supportLists endif Delivers a self contained gentle introduction to priority arguments directly applying them in algebraic contexts if supportLists endif Includes extensive exercises that both cement and amplify the materials if supportLists endif Provides complete introduction to the basics of computable analysis particularly in the context of computable structures if supportLists endif Offers the first monograph treatment of computable Polish groups effective profinite groups via Stone duality and effective abelian groups via Pontryagin duality if supportLists endif Presents the first book treatment of Friedberg enumerations of structures This unique volume is aimed at graduate students and researchers in computability theory as well as mathematicians seeking to understand the algorithmic content of structure theory Being self contained it provides ample opportunity for self study

Campbell,2004-12-13 AISC 2004 the 7th International Conference on Artificial Intelligence and Symbolic Computation was the latest in the series of specialized biennial conferences founded in 1992 by Jacques Calmet of the Universitat Karlsruhe and John Campbell of University College London with the initial title Artificial Intelligence and Symbolic Mathematical Computing AISMC The M disappeared from the title between the 1996 and 1998 conferences As the editors of the AISC 1998 proceedings said the organizers of the current meeting decided to drop the adjective mathematical and to emphasize that the conference is concerned with all aspects of symbolic computation in AI mathematical foundations implementations and applications including applications in industry and academia This remains the intended profile of the series and will figure in the call for papers for AISC 2006 which is intended to take place in China The distribution of papers in the present volume over all the areas of AISC happens to be rather noticeably mathematical an effect that emerged because we were concerned to select the best relevant papers that were offered to us in 2004 irrespective of their particular topics hence the title on the

cover Nevertheless we encourage researchers over the entire spectrum of AISC as expressed by the 1998 quotation above to be in touch with us about their interests and the possibility of eventual submission of papers on their work for the next conference in the series The papers in the present volume are evidence of the health of the field of AISC Additionally there are two reasons for optimism about the continuation of this situation

Large Scale Methods to Enumerate Extreme Rays and Elementary Modes (color Print) Marco Terzer, 2009-12-24 A major challenge in systems biology is to improve the understanding of complex metabolic networks Here we focus on structural analysis since it requires mainly reaction stoichiometries in contrary to detailed dynamic methods that are often limited by insufficient knowledge on mechanisms and parameters Thermodynamic reaction constraints and the steady state assumption reduce the solution space for valid reaction fluxes to a convex polyhedral cone Pathway analysis methods aim at finding a unique generating set for the flux cone called extreme rays or elementary modes We describe critical aspects for an efficient implementation of the double description method for large scale application The efficiency of introduced techniques is demonstrated with large application examples from combinatorics and systems biology

Quantifiers: Logics, Models and Computation Michal Krynicki, M. Mostowski, L.W. Szczerba, 2013-04-09 Quantifiers Logics Models and Computation is the first concentrated effort to give a systematic presentation of the main research results on the subject since the modern concept was formulated in the late 50s and early 60s The majority of the papers are in the nature of a handbook All of them are self contained at various levels of difficulty The Introduction surveys the main ideas and

problems encountered in the logical investigation of quantifiers The Prologue written by Per Lindström presents the early history of the concept of generalised quantifiers The volume then continues with a series of papers surveying various research areas particularly those that are of current interest Together they provide introductions to the subject from the points of view of mathematics linguistics and theoretical computer science The present volume has been prepared in parallel with *Quantifiers Logics Models and Computation Volume Two Contributions* which contains a collection of research papers on the subject in areas that are too fresh to be summarised The two volumes are complementary For logicians mathematicians philosophers linguists and computer scientists Suitable as a text for advanced undergraduate and graduate specialised courses in logic
