Hambleton,T. Salusbury,2012-12-06 As an industry biotechnology may be likened to the Hymn Book being both ancient and modern Whereas activities such as baking brewing the fermenting of foods date from our earliest attempts to control and utilise the environment the application of recombinant DNA technology is recognised as being at the forefront of novel industrial development Perhaps because of its association with processing foodstuffs together with the benefits derived from applications in the early organic chemistry and pharmaceutical industries biotechnology has been regarded as being inherently safe Yet unlike other modern industries such as chemical and nuclear where regulation has followed from incidents or accidents modern biotechnology has been subject to close scrutiny and regulation almost from its inception The process of regulation itself is somewhat unusual in that it was initially self imposed by the very scientists who developed the fundamental techniques of recombinant DNA technology They recognised the significance of their development but were concerned of the effects on humans and the environment of uncontrolled application of the new powerful technology Concern about the possible consequences of genetic manipulation has undoubtedly been the driving force behind the regulations that are now in place in many parts of the world and which are the subject of this book Safety issues in the biotechnology industry can be categorised under three headings worker environmental and consumer product safety **Separations for Biotechnology 2** D. Leo Pyle,2012-12-06 The challenge of bioseparations is to isolate and purify identified products from the dilute product broth produced from cell culture Innovation in bioseparations technology is increasingly driven by the requirements imposed by the growing importance of production on a process scale of injectable grade products and economic pressures to improve the efficiency of downstream processing As in other areas of technical change science does not necessarily precede new technology progress results from a complex and

messy mixture of advances in understanding ingenious ideas novel techniques and chance discoveries What is certain is that close interaction between academics and practitioners biological scientists and process engineers is needed to solve the problems of bioseparations The Second International Conference on Separations for Biotechnology at Reading UK in September 1990 set out to provide a critical multidisciplinary forum for the discussion of bioseparations This volume contains the papers presented at the meeting The meeting was organised around six themes with oral and poster presentations on the science and practice of bioseparations technology and the same structure has been kept for this book We have also included the texts of the keynote review paper by Professor Alan Michaels and the introductory review papers specially commissioned for the conference Within each part of this book the review paper is followed by the contributed papers grouped alphabetically by their first author All the original papers published here were accepted for publication after scientific refereeing Public Works Manual ,1987
