The Robot Factory Joseph Ganem, 2018-08-27 This book exposes a disturbing misuse of the scientific method

to advance policies and agendas that are in fact detrimental to both science and education The author a physics professor examines two related trends in education the practice of data driven reform and the disparaging of the traditional liberal arts in favor of programs with a heavy emphasis on science and technology Many of the reforms being foisted on educators have more in common with pseudo science than real science The reduction of education to a commodity and the shilling of science as a means to enhance corporate profits lead to an impoverished and stunted understanding of science in particular and of education in general How is it possible for schools with all students learning at grade level to be rated as failing teachers to be rated as ineffective after all their students meet their learning outcomes rising grade school math standards to result in more college students needing remedial math politicians to disparage scientists and their results but argue that more students should study science These bizarre outcomes have happened and are the result of an education system that misuses and misrepresents math and science in the classroom and in crafting education policies This book exposes the flawed and fallacious thinking that is damaging education at all levels throughout the United States and makes a compelling case for rethinking the standardized optimized and quantified approaches in vogue in education today to accommodate the different needs of individual teachers and students

The Twilight of the Middle Class Andrew Hoberek, 2009-01-10 In The Twilight of the Middle Class Andrew Hoberek challenges the commonly held notion that post World War II American fiction eschewed the economic for the psychological or the spiritual Reading works by Ayn Rand Ralph Ellison Saul Bellow Phillip Roth Flannery O Connor Thomas Pynchon Don DeLillo and others he shows how both the form and content of postwar fiction responded to the transformation of the American middle class from small property owners to white collar employees In the process he produces compelling new accounts of identity politics and postmodernism that will be of interest to anyone who reads or teaches contemporary fiction Hoberek argues that despite the financial gains and job security enjoyed by the postwar middle

class the transition to white collar employment paved the way for its current precarious state in a country marked by increasingly deep class divisions Postwar fiction provided the middle class with various imaginative substitutes for its former property owning independence substitutes that since then have not only allowed but abetted this class's downward mobility To read this fiction in the light of the middle class experience is thus not only to restore the severed connections between literary and economic history in the second half of the twentieth century but to explore the roots of the contemporary crisis of the middle class

Uncountable David Nirenberg, Ricardo L. Nirenberg, 2024-05-09 Ranging from math to literature to philosophy *Uncountable* explains how numbers triumphed as the basis of knowledge and

compromise our sense of humanity Our knowledge of mathematics has structured much of what we think we know about ourselves as individuals and communities shaping our psychologies sociologies and economies In pursuit of a more predictable and more controllable cosmos we have extended mathematical insights and methods to more and more aspects of the world Today those powers are greater than ever as computation is applied to virtually every aspect of human activity Yet in the process are we losing sight of the human When we apply mathematics so broadly what do we gain and what do we lose and at what risk to humanity These are the questions that David and Ricardo L Nirenberg ask in *Uncountable* a provocative account of how numerical relations became the cornerstone of human claims to knowledge truth and certainty There is a limit to these number based claims they argue which they set out to explore The Nirenbergs father and son bring together their backgrounds in math history literature religion and philosophy interweaving scientific experiments with readings of poems setting crises in mathematics alongside world wars and putting medieval Muslim and Buddhist philosophers in conversation with Einstein Schrödinger and other giants of modern physics The result is a powerful lesson in what counts as knowledge and its deepest implications for how we live our lives **Elsewhere in America** David Trend, 2016-04-28

so on the basis of the three interrelated topics of time life and memory Henri Bergson 1859 1941 was one of the most widely read philosophers of his era The European public was seeking for answers to questions of the soul and the nature of life and fitting within a historical niche between intellectual rationalism and intuitive spiritualism his writings drew much attention This work focuses on the relevance of his philosophy for developments in exact sciences today The discussion of physics in relation to the abstract and the concrete the life sciences in relation to concepts of life in relation to new and emerging biotechnology and the neurosciences in relation to the dual nature of human identity focuses on one main topic time Time isolated from experience as the measure of the events in the universe in modern physics time as the measure of emergent systems in evolution as the backdrop of the theory of evolution in biology time in relation to memory and imagination in neuropsychological accounts of memory The author thus discusses the ideas of Henri Bergson as a basis to unveil time as a living process rather than as an instrument for the measure of events This view forms the basis of a novel approach to the philosophy of technology An exciting book for academics interested in the interplay between hard sciences and philosophy
