3. In an arithmetic sequence, $t_6 : t_{11} = 5 : 9$ and $t_3 = 13$.

Find the value of t_{15} .

$$9t_6 = 5t_{11}$$

$$9(a + 5d) = 5(a + 10d)$$

$$9a + 45d = 5a + 50d$$

$$9a - 5a = 50d - 45d$$

$$\frac{4a}{4} = \frac{5d}{4}$$

$$a = \frac{5}{4}d$$

$$a = \frac{5}{4} \times 4 = 5$$

~~$\frac{t_6}{t_{11}} = \frac{5}{9}$~~

$$t_3 = 13$$

$$a + 2d = 13$$
$$4\left(\frac{5}{4}d + 2d\right) = 13$$

$$5d + 8d = 52$$

$$13d = 52$$

$$\therefore d = 4$$

$$t_n = a + (n-1)d$$

$$t_{15} = 5 + (15-1)(4)$$

$$= 5 + 14 \times 4$$

$$= 61$$

$$\therefore t_{15} = 61$$

of relaxation from his art the painter Degas used to try his hand at writing sonnets One day while so engaged he found that his in spiration had run dry In desperation he ran to his friend Mallarme who was a poet My poem won t come out he said and yet I m full of excellent ideas My dear Degas Mallarme retorted poetry is not written with ideas it is written with words If we seek an application of Mallarme s words to mathematics we find that we shall want to turn his paradox around We are led to say that mathematics does not consist of formulas it consists of ideas What is platitudinous about this statement is that mathe matics of course consists of ideas Who but the most unregenerate formalist asserting that mathematics is a meaningless game played with symbols would deny it What is paradoxical about the state ment is that symbols and formulas dominate the mathematical page and so one is naturally led to equate mathematics with its formulas **24th Annual**

in Your Head Steven M. Lehar,2003-01-30 The World In Your Head A Gestalt View of the Mechanism of Conscious Experience represents a bold assault on one of the greatest unsolved mysteries in science the nature of consciousness and the human mind Rather than examining the brain and nervous system to see what they tell us about the mind this book begins with an examination of conscious experience to see what it can tell us about the brain Through this analysis the first and most obvious observation is that consciousness appears as a volumetric spatial void containing colored objects and surfaces This reveals that the representation in the brain takes the form of an explicit volumetric spatial model of external reality Therefore the world we see around us is not the real world itself but merely a miniature virtual reality replica of that world in an internal representation In fact the phenomena of dreams and hallucinations clearly demonstrate the capacity of

the brain to construct complete virtual worlds even in the absence of sensory input Perception is somewhat like a guided hallucination based on sensory stimulation This insight allows us to examine the world of visual experience not as scientists exploring the external world but as perceptual scientists examining a rich and complex internal representation This unique approach to investigating mental function has implications in a wide variety of related fields including the nature of language and abstract thought and motor control and behavior It also has implications to the world of music art and dance showing how the patterns of regularity and periodicity in space and time apparent in those aesthetic domains reflect the periodic basis set of the underlying harmonic resonance representation in the brain

Physics of the Sun Dermott J. Mullan, 2022-09-13 With an emphasis on numerical modelling Physics of the Sun A

First Course presents a quantitative examination of the physical structure of the Sun and the conditions of its extended atmosphere. It gives step by step instructions for calculating the numerical values of various physical quantities in different regions of the Sun. Fully updated throughout with the latest results in solar physics, this second edition covers a wide range of topics on the Sun and stellar astrophysics including the structure of the Sun, solar radiation, the solar atmosphere, and Sun-space interactions. It explores how the physical conditions in the visible surface of the Sun are determined by the opacity of the material in the atmosphere. It also presents the empirical properties of convection in the Sun, discusses the physical conditions which must be satisfied for nuclear reactions to occur in the core, and describes how radiation transports energy from the core outwards. This text enables a practical appreciation of the physical models of solar processes. Numerical modelling problems and step by step instructions are featured throughout to empower students to calculate using their own codes the interior structure of different parts of the Sun and the frequencies of p modes and g modes. They encourage a firm grasp of the numerical values of actual physical parameters as a function of radial location in the Sun. It is an ideal introduction to solar physics for advanced undergraduate and graduate students in physics and astronomy, in addition to research professionals looking to incorporate modelling into their practises. Extensive bibliographies at the end of each chapter enable the reader to explore the latest research articles in the field. Features: Fully updated with the latest results from the spacecraft Hinode, Stereo, Solar Dynamics Observatory, SDO, Interface Region Imaging Spectrograph, IRIS, and Parker Solar Probe. Presents step by step explanations for calculating numerical models of the photosphere, convection zone, and radiative interior, with exercises and simulation problems to test learning. Describes the structure of polytropic spheres and the acoustic power in the Sun, and the process of thermal conduction in different physical conditions. **Light Metals**
