The Oxford Handbook of Computational Linguistics Ruslan Mitkov, 2022-06-02 Ruslan Mitkov's highly successful Oxford Handbook of Computational Linguistics has been substantially revised and expanded in this second edition. Alongside updated accounts of the topics covered in the first edition, it includes 17 new chapters on subjects such as semantic role labelling, text-to-speech synthesis, translation technology, opinion mining and sentiment analysis, and the application of Natural Language Processing in educational and biomedical contexts among many others. The volume is divided into four parts that examine respectively the linguistic fundamentals of computational linguistics, the methods and resources used such as statistical modelling, machine learning and corpus annotation, key language processing tasks including text segmentation, anaphora resolution and speech recognition, and the major applications of Natural Language Processing from machine translation to author profiling. The book will be an essential reference for researchers and students in computational linguistics and Natural Language Processing, as well as those working in related industries.

Foundations of Artificial Intelligence David Kirsh, 1992 In the 11 contributions, theorists historically associated with each position identify the basic tenets of their position. Have the classical methods and ideas of AI outlived their usefulness? Foundations of Artificial Intelligence critically evaluates the fundamental assumptions underpinning the dominant approaches to AI. In the 11 contributions, theorists historically associated with each position identify the basic tenets of their position. They discuss the underlying principles, describe the natural types of problems and tasks in which their approach succeeds, explain where its power comes from and what its scope and limits are. Theorists generally skeptical of these positions evaluate the effectiveness of the method or approach and explain why it works to the extent they believe it does and why it eventually fails.
