XIV Mediterranean Conference on Medical and Biological Engineering and Computing 2016

Efthymoulos Kyriacou, Stelios Christofides, Constantinos S. Pattichis, 2016-03-31 This volume presents the proceedings of Medicon 2016 held in Paphos Cyprus. Medicon 2016 is the XIV in the series of regional meetings of the International Federation of Medical and Biological Engineering IFMBE in the Mediterranean. The goal of Medicon 2016 is to provide updated information on the state of the art on Medical and Biological Engineering and Computing under the main theme Systems Medicine for the Delivery of Better Healthcare Services. Medical and Biological Engineering and Computing cover complementary disciplines that hold great promise for the advancement of research and development in complex medical and biological systems. Research and development in these areas are impacting the science and technology by advancing fundamental concepts in translational medicine by helping us understand human physiology and function at multiple levels by improving tools and techniques for the detection, prevention and treatment of disease. Medicon 2016 provides a common platform for the cross fertilization of ideas and to help shape knowledge and scientific achievements by bridging complementary disciplines into an interactive and attractive forum under the special theme of the conference that is Systems Medicine for the Delivery of Better Healthcare Services. The programme consists of some 290 invited and submitted papers on new developments around the Conference theme presented in 3 plenary sessions, 29 parallel scientific sessions and 12 special sessions.

Wearable and Nearable Biosensors and Systems for Healthcare Marco Di Rienzo, Ramakrishna Mukkamala, 2021-09-01

Biosensors and systems in the form of wearables and nearables (i.e. everyday sensorized objects with transmitting capabilities such as smartphones) are rapidly evolving for use in healthcare. Unlike conventional approaches, these technologies can enable seamless or on-demand physiological monitoring anytime and anywhere. Such monitoring can help transform healthcare from the current reactive one-size-fits-all hospital-centered approach into a future proactive, personalized, decentralized structure. Wearable and nearable biosensors and systems have been made possible through integrated innovations in sensor design, electronics, data transmission, power management, and signal processing. Although much progress has been made in this field, many open challenges for the scientific community remain, especially for those applications requiring high accuracy. This book contains the 12 papers that constituted a recent Special Issue of *Sensors* sharing the same title. The aim of the initiative was to provide a collection of state-of-the-art investigations on wearables and nearables in order to stimulate technological advances and the use of the technology to

benefit healthcare The topics covered by the book offer both depth and breadth pertaining to wearable and nearable technology They include new biosensors and data transmission techniques studies on accelerometers signal processing and cardiovascular monitoring clinical applications and validation of commercial devices
