Dietary Polyphenols and Human Health Anna Tresserra-Rimbau, 2020-12-23 Polyphenols are a heterogeneous group of bioactive compounds mainly found in plant based foods Numerous clinical and epidemiological studies have led to the result that polyphenol intake may protect against chronic diseases such as

cardiovascular and neurodegenerative diseases cancer or type 2 diabetes to name some Polyphenol intake estimation can be obtained through food frequency questionnaires and nutritional biomarkers both having their own advantages and disadvantages Although the association between these bioactive compounds and health seems irrefutable many questions remain still unanswered For instance more studies are needed to identify possible interactions and effect modulating variables such as smoking habit body mass index sex alcohol hormones other foods etc Moreover intestinal microbiota seems to play an important role in the metabolism of polyphenols but it is still unclear how

Platelets and Megakaryocytes Jonathan M. Gibbins, Martyn P. Mahaut-Smith, 2008-02-04 12 The average human body has in the order of 10 circulating platelets They are crucial for hemostasis and yet excessive platelet activation is a major cause of morbidity and mortality in western societies It is therefore not surprising that platelets have become one of the most extensively investigated biological cell types We are however far from understanding precisely how platelets become activated under physiological and pathophysiological conditions In addition there are large gaps in our knowledge of platelet production from their giant precursor cell the megakaryocyte Understanding megakaryocyte biology will be crucial for the development of platelet gene targeting The aim of Platelets and Megakaryocytes is therefore to bring together established and recently developed techniques to provide a comprehensive guide to the study of both the platelet and the megakaryocyte It consists of five sections split between two volumes The more functional assays appear in Volume 1 whereas Volume 2 includes signaling techniques postgenomic methods and a number of key perspectives chapters Part I of Volume 1 Platelets and Megakaryocytes Functional Assays describes many well established approaches to the study of platelet function including aggregometry secretion arachidonic acid metabolism procoagulant responses platelet adhesion under static or flow conditions flow cytometry and production of microparticles Although one would ideally wish to perform experiments with human platelets studies within the circulation using intravital microscopy require the use of animal models which are described in Chapter 16

vol 1 **Hematopathology in Oncology** William G. Finn, LoAnn C. Peterson, 2006-04-18 Hematologist oncologists rely heavily upon the discipline of hematopathology for the care and management of their patients Whether interpreting a lymph node or bone marrow biopsy directing a high throughput automated hematology laboratory or translating testing modalities from the research bench to the clinical laboratory hematopathologists and other laboratory medicine specialists provide a steady stream of critical data for the clinical practitioner Recently the rapid advances in diagnosis and treatment of hematological disorders including the need to evaluate patients eligibility for and monitor responses to rapidly evolving targeted therapies have made the close collaboration between pathologists and clinician practitioners even more essential Our goal is to provide outstanding reviews of selected topics in hematopathology in a format that provides both general and historical background as well as an overview of the state of the art in diagnostic hematopathology with an eye on future potential and future developments *Schalm's Veterinary Hematology* Marjory B.
