Bahamian Students' Experiences with Mathematics in American Universities and Colleges Nikki Rochelle Cleare, 2011 This longitudinal qualitative multi case study examines the mathematical experiences of three Bahamian students pursuing science degrees in American universities and its relationship to their previous mathematical experiences in their Bahamian high schools Drawing on cultural psychology and sociocultural theories of learning this study found that the relationship between the academic preparedness of the participants on their experiences with collegiate mathematics is not limited to subject content only The lessons learnt from the implied curriculum also play a role in their experiences with collegiate mathematics Of the three participants two have had to learn develop techniques for studying because they had not been sufficiently challenged in their previous environments to do so Each of the cases also highlights some powerful constructs

needed for success in mathematics and at least two emphasize making connections between concepts procedures manipulatives tools and multiple approaches when solving problems This study contributes to an emerging area of research on student persistence in college level mathematics courses as well as to the ongoing discussions in mathematics education regarding the role importance of conceptual understanding and how to promote it The study makes visible some of the ways in which students post secondary experiences with mathematics are shaped by their perception of their mathematical preparation thus providing a basis for discussions of possible curricular change in the Bahamas It also suggests that issues such as confidence and school teacher expectations of students may play a role in the development of conceptual understanding

Geometric Algebra with Applications in Science and Engineering Eduardo Bayro Corrochano, Garret Sobczyk,2011-06-28 The goal of this book is to present a unified mathematical treatment of diverse problems in mathematics physics computer science and engineer ing using geometric algebra Geometric algebra was invented by William Kingdon Clifford in 1878 as a unification and generalization of the works of Grassmann and Hamilton which came more than a quarter of a century before Whereas the algebras of Clifford and Grassmann are well known in advanced mathematics and physics they have never made an impact in elementary textbooks where the vector algebra of Gibbs Heaviside still predominates The approach to Clifford algebra adopted in most of the articles here was pioneered in the 1960s by David Hestenes Later together with Garret Sobczyk he developed it into a unified language for mathematics and physics Sobczyk first learned about the power of geometric algebra in classes in electrodynamics and relativity taught by Hestenes at Arizona State University from 1966 to 1967 He still vividly remembers a feeling of disbelief that the fundamental geometric product of vectors could have been left out of his undergraduate mathematics education Geometric algebra provides a rich general mathematical framework for the development of multilinear algebra projective and affine geometry calculus on a manifold the representation of Lie groups and Lie algebras the use of the horosphere and many other areas This book is addressed to a broad audience of applied mathematicians physicists computer scientists and engineers
