Industrial Robots Programming J. Norberto Pires, 2007-04-03 Industrial Robots Programming focuses on designing and building robotic manufacturing cells and explores the capabilities of today's industrial equipment as well as the latest computer and software technologies. Special attention is given to the input devices and systems that create efficient human-machine interfaces and how they help non-technical personnel perform necessary programming control and supervision tasks. Drawing upon years of practical experience and using numerous examples and illustrative applications, J. Norberto Pires covers robotics programming as it applies to the current industrial robotic equipment including manipulators, control systems, and programming environments. Software interfaces that can be used to develop distributed industrial manufacturing cells and techniques which can be used to build interfaces between robots and computers. Real-world applications with examples designed and implemented recently in the lab. Industrial Robots Programming has been selected for indexing by Scopus. Robotic Welding, Intelligence and Automation Tzyh-Jong Tarn, Shan-Ben Chen, Changjiu Zhou, 2007-08-13 Robotic welding systems have been used in different types of manufacturing. They can provide several benefits in welding applications. The most prominent advantages of robotic welding are precision and productivity. Another benefit is that labor costs can be reduced. Robotic welding also reduces risk by moving the human welder/operator away from hazardous fumes and molten metal close to the welding arc. The robotic welding system usually involves measuring and identifying the component to be welded, positioning it, controlling the welding parameters, and documenting the produced welds. However, traditional robotic welding systems rely heavily upon human intervention. It does

not seem that the traditional robotic welding techniques by themselves can cope well with uncertainties in the welding surroundings and conditions e.g. variation of weld pool dynamics, fluxion, solid weld torch and etc. On the other hand, the advent of intelligent techniques provides us with a powerful tool for solving demanding real world problems with uncertain and unpredictable environments. Therefore, it is interesting to gather current trends and to provide a high quality forum for engineers and researchers working in the field of intelligent techniques for robotic welding systems. This volume brings together a broad range of invited and contributed papers that describe recent progress in this field.

Publisher's Note: Products purchased from Third Party sellers are not guaranteed by the publisher for quality, authenticity or access to any online entitlements included with the product. Robotics is becoming an increasingly popular field for hobbyists and professionals alike. The cost of the mechanics and electronics required to build a robot are low enough that almost anybody can afford it. The hardware that used to require government funding or a large university is now available to the average person. At the same time, programming is becoming a more common skill. This book combines the most sophisticated parts of robotics and programming to fill a real gap in available information. Most robotics books today use microcontrollers as the brains of the robots. This approach is fine for smaller, less expensive projects but has serious limitations. When attempting to build a robot with sophisticated movements, navigation abilities, vision, and picture capturing abilities, it is better to use a single board computer (SBC) such as Linux as the controller.
